

NOWA

SUMMARY

FIRST-IN-CLASS FOR ITS SIMPLICITY

Practically plug-and-play

By leveraging the **LTE cellular network**, the NOWA 4S system makes installation easier than ever. Plug it in and configure it—That's all.

No technology infrastructure. No wiring. No router. No Wi-Fi settings.
No drilling holes in the walls. No drilling in the concrete slab.

Simpler. Safer.

Introducing the new generation of water leakage detection and control systems. NOWA 4S features numerous design, safety, and functionality improvements. There's a lot going on behind its new sleek, modern look. Everything has been designed for simplicity; from our choice in integrating LTE technology to changing our system's installation method and rethinking usage.

SIMPLE

NOTHING IS COMPLICATED WITH US. ONLY PRACTICALITY.

This is our greatest achievement in ease of use. NOWA 4S is a true reflection of what our customers want from us. The LCD display interface is intuitive, and the functions are limited to what's essential.

The only one to use the power of the screen

NOWA 4S shows the system's status at a glance and clearly identifies the sensor involved if an incident occurs. You can either use the panel directly or open the mobile app.

As simple as three buttons

The system's simplicity makes it accessible to all types of owners.

Only the functions requested by users

It's all very intuitive, with no need to remember complex sequences.

Constant, autonomous system updates

The updates are done remotely, without any action required on your end.

SAFE

WELCOME TO A NEW ERA: LTE TECHNOLOGY.

Unlike previous generations of systems that communicated via Wi-Fi, the NOWA 4S system draws on the power and reliability of the cellular network to synchronize each system with the online portal in real time.

**Meshed or not, a single
Wi-Fi network
becomes a weak link**

No Wi-Fi network by itself, whether personal or meshed, can offer the same reliable continuity of service as the combination of LTE cellular and Wi-Fi networks.

**No more risks
of Wi-Fi outages**

Safe from human errors and unplugged routers. No password changes.

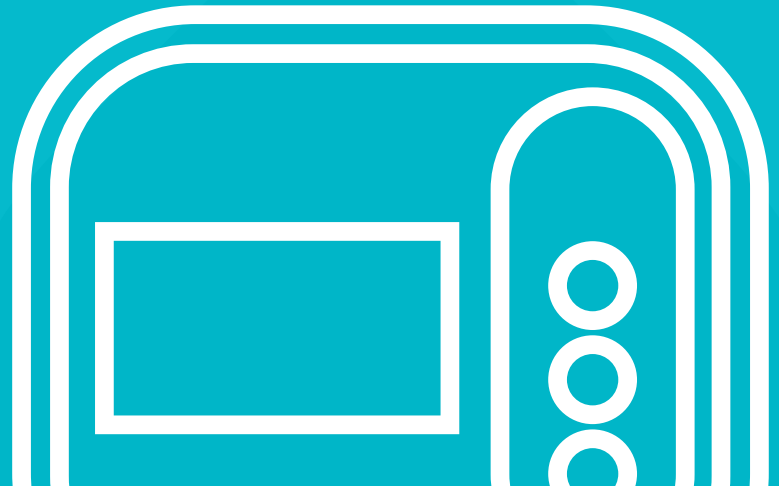

**SIM card in each
and every panel**

The system in each unit communicates independently with the portal.

**Hardware encryption
on a circuit isolated
from software**

Compliance with Canadian Centre for Cyber Security's recommendations.

AT A GLANCE

Make an informed choice.

FEATURES	NOWA 4S	COMPETITION
Link to the online platform	LTE + WI-FI	WI-FI
Panel display	YES	NO
Mobile app	YES	YES
Battery life – sensors	10-YEAR warranty	NO warranty
Backup batteries – panels	Rechargeable	NON-rechargeable
Self-testing – sensors	Daily	NO for some products
Real-time valve monitoring	YES	NO
Valve maintenance	Weekly	NO for some products
Updated, scalable system	YES	NO for some products
SMS and email notifications	YES	YES
Remote control	YES	NO for some products
Encryption at source	YES	NO
Redundant data storage in Canada	YES	NO for some products
Made in Canada	YES	NO for some products
24/7 support for emergencies	YES	NO
Monthly connectivity reports	YES	NO
Annual reports for insurers	YES	NO
